

Vidar NDT Pro

VIDAR NDT PRO Industrial Film Digitizer offers a more cost-effective alternative for digitizing films. With its next-generation High Definition CCD technology and its unique Automatic Digitizer Calibration feature, there is virtually no variation in image quality and ensures excellent grayscale reproduction in every image.

NDT Gateway Software

NDT gateway software allows to adjust scanner's brightness and contrast settings for dealing with darker older films. You will be able to measure distances, areas, angles and percentages of abnormalities in ROIs. Make your own reports which will be stored with images in the database.

Multi Strip Feeder

The Flexible Film Feeder can scan multiple strips simultaneously that dramatically increases throughput. Film widths are possible to digitize from 6cm to 35.5cm (2.36" to 14"). Multi-strip Film Feeder reduces transition times between digitizing projects.
